

A look at some national pavilion designs

German Pavilion

The German Federal Ministry of Economics and Technology, Bonn has overall responsibility for the German Pavilion. The pavilion management company is Messe Frankfurt GmbH.

Spatial concept, architecture and general planning are by SCHMIDHUBER, München and content concept, exhibition and media are by Milla & Partner, Stuttgart. Project management and construction are by Nüssli (Deutschland) GmbH.

U.S. Pavilion

The James Beard Foundation and the International Culinary Center in association with the American Chamber of Commerce in Italy are partnered in a newly-formed nonprofit "Friends of the U.S. Pavilion Milano 2015" to provide the US Pavilion. The pavilion has been designed to look like a granary. Visitors will be engaged in an itinerary "from farm to table" where video installations and vertical and roof gardens - representing the 50 US states and the White House - will lead them to discover the rich cultural, scientific, and culinary tapestry that forms the country. A specific program of initiatives - the Manifesto Project - will be developed in support of corporate responsibility and environmental and food sustainability. A plan envisioning students' involvement will also be launched in cooperation with Italian study projects at US universities.

Spanish Pavilion

B720 Arquitectos led by Fermín Vázquez, is the designer of the Spanish Pavilion for Expo Milano 2015, the public body responsible for Spain's involvement in Milan 2015.

China Pavilion

Tsinghua University in collaboration with New York-based design firm studio link-arc conceived the China Pavilion as a field of different spaces, each with a theme. Hovering over the 'field of hope' on the ground floor, a floating cloud structure offers a distinctive undulating roof and shelters the cultural and exhibition programs beneath.

Israeli Pavilion

Award winning Israeli architect David Knafo has presented the official design for the Israel Pavilion at 2015 Milan Expo. The pavilion is to be situated in a strategic position next to that of the hosting Italian Pavilion on the Milan Expo site.

United Arab Emirates Pavilion

Foster + Partners are the designers for the United Arab Emirates pavilion. Designed to evoke the experience of walking through UAE's ancient communities, the elongated site will be transformed into a contemporary reinterpretation of a desert city. Passive principles, such as rainwater harvesting and the integration of photovoltaic cells, are targeted to achieve LEED Platinum certification.
